

# Management and Integration

## Distributed additive manufacturing at scale

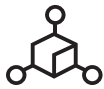

Included in the Essential and Advanced Digital Forge Complete plans— Management and Integration is the next generation of cloud-based additive manufacturing software solutions from Markforged. It helps organizations manage their distributed manufacturing operations on an enterprise and global scale. With Management and Integration, businesses can control all printers, users, and workflows with increased efficiency and insight.

# Overview

## Role-based access control

Increase operational efficiency and gain increased visibility over your team with role-based access control. Give the right people access to the right devices and parts — when and where they need it — based on projects and team responsibilities.

## Integrated and automated operations

Connect our 3D print solutions to other enterprise systems through APIs so users can easily identify and print parts automatically — no additive manufacturing expertise required.

## Enterprise-level security management

Apply corporate user security policies and solutions for easy, consistent identity enforcement and user management.

## Custom analytics

Track and analyze part costs and lead time for insights into additive manufacturing return on investment. Get visibility into fleet use via real-time monitoring dashboards.
